OUTLINE

13.1 Introduction	475	13.4.3 Different Routes to Deliver the Drug to Eye	480
13.2 Structure of Eye	475	13.5 Various Ocular Disorders	481
13.2.1 Cornea and Sclera	475	13.6 Types of Formulation for Ocular Delivery	484
13.2.2 Iris	477	13.6.1 Solutions	485
13.2.3 Choroid	477	13.6.2 Suspensions	486
13.2.4 Insubstantial Space of the Lower Conjunctival SAC (Cul-De-SAC)	477	13.6.3 Emulsion	486
13.3 Lead From Anatomy and Physiology of Eye Towards Ocular Product Development	478	13.6.4 Sol to Gel Systems	488
13.4 Considerations of Tear Film and Lachrymal Drainage for the Design of Ocular Drug Delivery System	479	13.6.5 In Situ Gelling System	488
13.4.1 Drawbacks of Conventional Topical Drug Delivery	479	13.6.6 Ointments	489
13.4.2 Different Ocular Barriers	479	13.6.7 Microemulsions	489
		13.6.8 Liposomes	490
		13.6.9 Nanomicelles	491
		13.6.10 Micro and Nanoparticulate Systems	491
		13.6.11 Other Ocular Drug Delivery Devices	496
