PREAMBLE

Physics is the most basic of the natural sciences. It is concerned with understanding the world on all scales of length, time, and energy. The methods of physics are diverse, but they share a common objective to develop and refine fundamental models that quantitatively explain observations and the results of experiments. The discoveries of physics, exemplified by the laws of physics, rank among the most important achievements of human inquiry, and have an enormous impact on human culture and civilization.

The story of physics has been of people who thought outside the box. From Galileo and Newton in the 1600s to Einstein and Feynman in the 20th century, the progress of science in answering fundamental questions about the Nature is rooted in a different way of approaching things. A scientific way to test the validity of a physical theory, using a methodical approach to compare the implications of the theory in question with the associated conclusions drawn from experiments and observations conducted to test it.

The B.Sc. Programme in Physics is a rigorous study program at Undergraduate level covering both the depth and breadth of all relevant areas, and provides substantial research training. It is designed to impart a thorough knowledge of the fundamental principles of the several branches of physics, as mathematically and experimentally demonstrated; and also to execute with their own hands various experiments to have hands-on experience with the tools and methods of physics, not simply with the concepts. The program aims to train future generations of physicists with specialization in the frontier areas of research.

Besides training the future generations of physicists, the programme aims at imparting training in instrumentation and communication skills for all round development of students.

The programme consists of 24 credits in core area of physics, 12 credits for elective courses in physics and four (8) credits for Skill enhancement Course which is optional. Thus, a total of 36 credits are required to complete the B.Sc. Programme in Physics.

S.No.	Nature of Courses	Credits
1.	Core Courses	24
2.	Departmental Elective Courses	12
3.	Skill Enhancement Courses (Optional)	8
Total		44 Credits

[A] Scheme of Examination :

S.No.	Nature of Exam	Marks
1.	Mid Semester Examination	20
2.	Internal Assessment	20
3.	End Semester Examination	60
Total		100

[B] Assessments :

i) Internal Assessment:

DEPARTMENT OF PHYSICS, DR. HARISINGH GOUR VISHWAVIDYALAYA, SAGAR
(A CENTRAL UNIVERSITY)

DEPARTMENT OF PHYSICS

Each theory course must clearly mention the methodology of assessment i.e. assignment, presentation, group discussion etc depending on the number of students in the class and feasibility of adopting a particular methodology. The distribution of marks for internal assessments shall be as follows;

- | | | | |
|------|-------------------------------------|---|----------|
| (i) | Evaluation of the assignment, | : | |
| | presentation , group discussion etc | : | 15 Marks |
| (ii) | Attendance | : | 05 Marks |

The marks for attendance shall be awarded as follows :

- | | | | |
|-------|---------------------|---|----------|
| (i) | 75 % and Below | : | 00 Mark |
| (ii) | >75 % and upto 80 % | : | 01 Mark |
| (iii) | >80 % and upto 85 % | : | 02 Marks |
| (iv) | >85 % and upto 90 % | : | 03 Marks |
| (v) | >90 % and upto 95 % | : | 04 Marks |
| (vi) | >95 % and | : | 05 Marks |

The introductory note must also mention that to be eligible to appear in End Semester Examination a student must appear in Mid Semester Examination and internal Assessment.

b) Practical/ Lab Courses :

- | | | |
|------|---|------------|
| (i) | Performing and getting the experiment checked : | 15 Marks |
| | regularly and incorporating the suggestion in the practical note book | |
| (ii) | Attendance | : 05 Marks |

The marks for attendance shall be as follows :

- | | | | |
|-------|---------------------|---|----------|
| (i) | 75 % and Below | : | 00 Mark |
| (ii) | >75 % and upto 80 % | : | 01 Mark |
| (iii) | >80 % and upto 85 % | : | 02 Marks |
| (iv) | >85 % and upto 90 % | : | 03 Marks |
| (v) | >90 % and upto 95 % | : | 04 Marks |
| (vi) | >95 % and | : | 05 Marks |

[C] End Semester Examination for Practical/ Lab Courses :

It will consist of 60 marks as follows :

- | | | | |
|-----|---|---|----------|
| (a) | Assessment of performance in the Experiment | : | 50 Marks |
| (b) | Viva-Voce of Experiment | : | 10 Marks |

Attendance: 75 % attendance in a course is mandatory for a student to appear in end semester examination.

B.Sc.: I Semester : Session: 2019-20

Core Course

		L	T	P	C
PHY CC 111	MECHANICS	4	0	0	4

Theory: 60 Lectures

Credits: 04

Objective :

1. To describe the vector analysis and differential equations and their uses in Physics.
2. Describe different types of motions and conservation laws.
3. Describe the properties of matter like elasticity and viscosity.
4. To describe relativity and relativistic motion.

UNIT - I

Vectors: Vector algebra: Scalar and vector products, Derivatives of a vector with respect to a parameter.

Ordinary Differential Equations: 1st order homogeneous differential equations, 2nd order homogeneous differential equations with constant coefficients.

(Lectures-10)

UNIT - II

Law of Motion: Frames of reference, Newton's Laws of motion, Motion of a particle in a central force field (motion in a plane, angular momentum is conserved, areal velocity is constant), Kepler's Laws (statement only), Dynamics of a system of particles, Centre of Mass.

Momentum and Energy: Conservation of momentum, Work and energy, Conservation of energy, Motion of rockets.

(Lectures-14)

UNIT - III

Rotational Motion: Angular velocity and angular momentum, Torque, Conservation of angular momentum.

Gravitation: Newton's Law of Gravitation, Satellite in circular orbit and applications, geosynchronous orbits, Weightlessness, Basic idea of global positioning system (GPS), Physiological effects on astronauts.

(Lectures-12)

UNIT - IV

Elasticity: Hooke's Law – Stress-strain diagram- Elastic moduli-Relation between elastic constants – Poisson's Ratio-Expression for Poisson's ratio in terms of elastic constants – Work done in stretching and work done in twisting a wire- Twisting couple on a cylinder – Determination of Rigidity modulus and moment of inertia – q, η and σ by Searle's method. Viscous flow of fluids, coefficient of viscosity, Stoke's law and expression for terminal velocity.

(Lectures-12)

UNIT - V

Oscillations: Simple harmonic motion, Differential equation of SHM and its solutions, Kinetic and Potential Energy, Total Energy and their time averages, Damped oscillations.

Special Theory of Relativity: Constancy of speed of light, Postulates of Special Theory of Relativity. Length contraction; Time dilation; Relativistic addition of velocities

(Lectures-12)

DEPARTMENT OF PHYSICS, DR. HARISINGH GOUR VISHWAVIDYALAYA, SAGAR
(A CENTRAL UNIVERSITY)
DEPARTMENT OF PHYSICS

Note: Students are not familiar with vector calculus. Hence all examples involve differentiation either in one dimension or with respect to the radial coordinate.

Outcomes : After completion of the course students will be able to –

1. Get knowledge about the vectors and differential equations used in physics.
2. Get idea of different types of motions and conservation laws.
3. Get knowledge about various properties of matter like elasticity and viscosity.
4. To understand various types of oscillatory and relativistic motions.

Essential Readings :

- University Physics, FW Sears, MW Zemansky and HD Young 13/e, 1986. Addison Wesley.
- Mechanics Berkeley Physics course, v.1: Charles Kittel, et.AL. 2007, Tata McGraw-Hill.
- Mechanics – D.S. Mathur

Suggested Readings :

- Physics – Resnick, Halliday & Walker 9/e, 2010, Wiley
- University Physics, Ronald Lane Reese, 2003, Thomson Brooks/Cole.

DEPARTMENT OF PHYSICS

B.Sc.: I Semester : Session: 2019-2020

Core Course

		L	T	P	C
PHY CC 112	MECHANICS LAB	0	0	2	2

Credits: 02

Objective :

To describe the vector analysis and differential equations and their uses in Physics. Describe different types of motions and conservation laws. Describe the properties of matter like elasticity and viscosity. To describe relativity and relativistic motion.

1. Measurements of length (or diameter) using vernier caliper, screw gauge and travelling microscope.
2. To determine the Height of a Building using a Sextant.
3. To determine the Moment of Inertia of a Flywheel.
4. To determine the Young's Modulus of a Wire by Optical Lever Method.
5. To determine the Modulus of Rigidity of a Wire by Maxwell's needle.
6. To determine the Elastic Constants of a Wire by Searle's method.
7. To determine g by Bar Pendulum.
8. To determine g by Kater's Pendulum.
9. To determine g and velocity for a freely falling body using Digital Timing Technique.
10. To study the Motion of a spring and calculate Spring Constant (K) and Value of g.

Expected Outcomes :

1. Get knowledge about the vectors and differential equations used in physics.
2. Get idea of different types of motions and conservation laws.

Essential Reading :

- A Text Book of Practical Physics, Indu Prakash and Ramakrishna, 11th Edition, 2011, Kitab Mahal, New Delhi.

Suggested Readings:

- Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House.
- Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers.

DEPARTMENT OF PHYSICS, DR. HARISINGH GOUR VISHWAVIDYALAYA, SAGAR
(A CENTRAL UNIVERSITY)
DEPARTMENT OF PHYSICS

B.Sc.: II Semester : Session: 2019-2020

Core Course

		L	T	P	C
PHY CC 211	ELECTRICITY AND MAGNETISM	4	0	0	4

Theory: 60 Lectures

Credits: 04

Objective : Students will learn the basic of Electricity and Magnetism which have vast applications in all area of science and technology. Students will be familiar with static electricity, current electricity, capacitor, Inductor, Dielectric materials, laws of magnetism and Maxwell's Equations.

UNIT - I

Vector Analysis: Scalar and Vector product, gradient, divergence, Curl and their significance, Vector Integration, Line, Surface and volume integrals of Vector fields, Gauss-divergence theorem and Stokes's theorem of vectors (statement only).
(Lectures-12)

UNIT - II

Electrostatics: Electrostatic Field, electric flux, Gauss's theorem of electrostatics. Applications of Gauss theorem-Electric field due to point charge, infinite line of charge, uniformly charged spherical shell and solid sphere, plane charges sheet, charged conductor. Electric potential as line integral of electric field, potential due to a point charge, electric dipole, uniformly charged spherical shell and solid sphere. Calculation of electric field from potential, Capacitance of an isolated spherical conductor, Parallel plate, spherical and cylindrical condenser, Energy per unit volume in electrostatic field.
(Lectures-12)

UNIT - III

Dielectric & Steady Currents : medium, Polarisation, Displacement vector. Gauss's theorem in dielectrics. Parallel plate capacitor completely filled with dielectric.

Steady current, current density J , non-steady current and continuity equation, Kirchoff's law (statement only) and analysis of multiloop circuits, rise and decay of current in LR and CR circuits, decay constants, transients in LCR circuits.
(Lectures-12)

UNIT - IV

Magnetism:

Magnetostatics: Biot-Savart's law & its applications- straight conductor, circular coil, solenoid carrying current. Divergence and curl of magnetic field, Magnetic vector potential, Ampere's circuital law.

Magnetic properties of materials: Magnetic intensity, magnetic induction, permeability, magnetic susceptibility. Brief introduction of dia-para-and ferro-magnetic materials.
(Lectures-12)

UNIT - V

Electromagnetic Induction: Faraday's laws of electromagnetic induction, Lenz's law, self and mutual inductance, L of single coil, M of two coils, Energy stored in magnetic field.

Maxwell's equations and Electromagnetic wave propagation: Equation of continuity of current, Displacement current, Maxwell's equations, Poynting vector, energy density in electromagnetic field, electromagnetic wave propagation through vacuum and isotropic dielectric medium, transverse nature of EM waves, polarization.
(Lectures-12)

Outcome: Students will be familiar with the relation between electricity and magnetism. They will have basic

Objective: Students will get hand on experience on different experiments related to the Electricity and Magnetism. Students will be able to see the applications of Electricity and Magnetism theory they learned from PHYCC 211. They will be familiar with different instruments like LCR circuit, Galvanometer, Wheatstone bridge, Capacitor, Inductor and solenoid coil.

- To use a Multimeter for measuring (a) Resistance, (b) AC and DC voltages, (c) DC Current and (d) Checking electrical fuses.
- Ballistic Galvanometer.
 - Measurement of charge and current sensitivity.
 - Measurement of CDR
 - Determine a high resistance by Leakage Method.
 - To determine Self Inductance of a Coil by Rayleigh's Method.
- To compare capacitances using De'Sauty's bridge.
- Measurement of field strength B and its variation in a Solenoid (Determine dB/dx).
- To study the characteristics of a Series RC Circuit.
- To study the series LCR circuit and determine its (a) Resonant Frequency, (b) Quality factor.
- To study a parallel LCR circuit and determine its (a) Anti-resonant frequency and (b) Quality factor Q.
- To determine a Low Resistance by Carey Foster's Bridge.
- To verify the Thevenin and Norton theorem.
- To verify the Superposition and maximum power transfer theorem.

Outcome: Students will be able to understand the applications of basic principle of Electricity and Magnetism theory in real world.

Essential Reading :

- A Text Book of Practical Physics, Indu Prakash and Ramakrishna, 11th Edition, 2011, Kitab Mahal, New Delhi.

PHY CC 311	THERMAL PHYSICS AND STATISTICAL MECHANICS	4	0	0	4
------------	---	---	---	---	---

Theory: 60 Lectures

Credits: 04

Objective : The objective of this course is to develop a working knowledge of laws and methods of thermodynamics and elementary statistical mechanics and to use this knowledge to explain various applications many of these applications related to physics of condensed matter.

UNIT - I

Laws of Thermodynamics:

Thermodynamic Description of system: Zeroth Law of thermodynamics and temperature. First law internal energy, conversion of heat into work, Various Thermodynamical Processes, Applications of First Law: General Relation between C_p & C_v , Work Done during Isothermal and Adiabatic Processes, Compressibility & Expansion Coefficient. (12 Lectures)

UNIT - II

Reversible & irreversible processes, Second law & Entropy, Carnot's cycle & theorem, Entropy change in reversible & irreversible processes, Entropy-temperature diagrams, Third law of thermodynamics. (12 Lectures)

UNIT - III

Thermodynamic Potentials: Enthalpy, Gibbs, Helmholtz and Internal Energy functions, Maxwell relations & applications - Joule-Thompson Effect, Clausius- Clapeyron Equation, Expression for $(C_p - C_v)$, C_p/C_v , TdS equations. (12 Lectures)

UNIT - IV

Theory of Radiation: Blackbody radiation, Spectral distribution, Concept of Energy Density, Derivation of Planck's law, Deduction of Wien's distribution law, Rayleigh-Jeans Law, Stefan Boltzmann Law, Wien's displacement law from Planck's law. (12 Lectures)

UNIT - V

Statistical Mechanics: Phase space, Macrostate and Microstate, Entropy and Thermodynamic probability, Maxwell-Boltzmann law - distribution of velocity - Quantum statistics - Fermi-Dirac distribution law - electron gas - Bose-Einstein distribution law - photon gas - comparison of the statistics. (12 Lectures)

Outcome : Students will demonstrate knowledge-based competencies in the fields of thermodynamics and statistical mechanics.

Essential Readings :

- Thermal Physics, S. Garg, R. Bansal and C. Ghosh, 1993, Tata McGraw-Hill.
- A Treatise on Heat, Meghnad Saha, and B.N. Srivastava, 1969, Indian Press.
- Thermodynamics, Enrico Fermi, 1956, Courier Dover Publications.
- Heat and Thermodynamics, M.W.Zemasky and R. Dittman, 1981, McGraw Hill 13

Suggested Readings :

- Thermodynamics, Kinetic theory & Statistical thermodynamics, F.W.Sears & G.L.Salinger. 1988, Narosa
- University Physics, Ronald Lane Reese, 2003, Thomson Brooks/Cole.
- Thermal Physics, A. Kumar and S.P. Taneja, 2014, R. Chand Publications.

DEPARTMENT OF PHYSICS

B.Sc. III Semester : Session : 2019-2020
Core Course

			L	T	P	C
PHY CC 312	THERMAL PHYSICS AND STATISTICAL MECHANICS LAB		0	0	2	2

Objectives: The objective of this course is to develop a working knowledge of laws and methods of thermodynamics and elementary statistical mechanics and to use this knowledge to explore various applications many of these applications related to physics of condensed matter.

1. To determine Mechanical Equivalent of Heat, J, by Callender and Barne's constant flow method.
2. Measurement of Planck's constant using black body radiation.
3. To determine Stefan's Constant.
4. To determine the coefficient of thermal conductivity of copper by Searle's Apparatus.
5. To determine the Coefficient of Thermal Conductivity of Cu by Angstrom's Method.
6. To determine the coefficient of thermal conductivity of a bad conductor by Lee and Charlton's disc method.
7. To determine the temperature co-efficient of resistance by Platinum resistance thermometer.
8. To study the variation of thermo emf across two junctions of a thermocouple with temperature.
9. To record and analyze the cooling temperature of an hot object as a function of time using a thermocouple.
10. To calibrate Resistance Temperature Device (RTD) using Null Method/Off-Balance Bridge

Outcome : Students will demonstrate knowledge-based competencies in the fields of thermodynamics and statistical mechanics.

Essential Readings

- A Text Book of Practical Physics, Indu Prakash and Ramakrishna, 11th Edition, 2011, Kitab Mahal, New Delhi.
- A Laboratory Manual of Physics for Undergraduate Classes, D.P. Khandelwal, 1985, Vani Publication.

Suggested Readings:

- Advanced Practical Physics for students, B.L. Flint & H.T. Worsnop, 1971, Asia Publishing House.

Theory: 30 Lectures				
				Credits: 02

Objective : The objective of the course is to enable the students to design and trouble shoots the electrical circuits networks and appliances through hands-on mode basic electricity principal: Voltage, current, resistance, and power ohms law, AC and DC electricity. Students will enable to design and trouble shoots the electrical circuits, networks and appliances through hands-on mode

UNIT - I

Basic Electricity Principles: Voltage, Current, Resistance, and Power. Ohm's law. Series, parallel, and series-parallel combinations. AC Electricity and DC Electricity. Familiarization with multimeter, voltmeter and ammeter.

(5 Lectures)

UNIT - II

Understanding Electrical Circuits: Main electric circuit elements and their combination. Rules to analyze DC sourced electrical circuits. Current and voltage drop across the DC circuit elements. Single-phase and three-phase alternating current sources. Rules to analyze AC sourced electrical circuits. Real, imaginary and complex power components of AC source. Power factor. Saving energy and money.

(6 Lectures)

UNIT - III

Generators and Transformers: DC Power sources. AC/DC generators. Inductance, capacitance, and impedance. Operation of transformers.

Electric Motors: Single-phase, three-phase & DC motors. Basic design. Interfacing DC or AC sources to control heaters & motors. Speed & power of ac motor.

(7 Lectures)

UNIT - IV

Electrical Protection: Relays. Fuses and disconnect switches. Circuit breakers. Overload devices. Ground-fault protection. Grounding and isolating. Phase reversal. Surge protection. Interfacing DC or AC sources to control elements (relay protection device)

(6 Lectures)

UNIT - V

Electrical Wiring: Different types of conductors and cables. Basics of wiring-Star and delta connection. Voltage drop and losses across cables and conductors. Instruments to measure current, voltage, power in DC and AC circuits. Insulation. Solid and stranded cable. Conduit. Cable trays. Splices: wirenuts, crimps, terminal blocks, split bolts, and solder. Preparation of extension board.

(6 Lectures)

Outcome : To prepare the students to have a basic knowledge in electrical circuits and network and to understand the concept of skills students can use to the knowledge to handle the instruments in proper way.

Essential Readings :

- A text book in Electrical Technology - B L Theraja, A K Theraja, s. Chand & Co. Volume II, 2005

Suggested Reading :

- Performance and design of AC machines - M G Say, CBS Publisher, 3rd Edition 2002

PHY CC 411	WAVES AND OPTICS	L	T	P	C
		4	0	0	4

Theory: 60 Lectures

Credits: 04

Objective : The objective of this course is to familiarize the students with waves and optics.

(a) To explain the basic law of waves and oscillations and its application.

(b) To explore the laws of physical optics (wave nature) of light and its applications in rules.

UNIT - I

Superposition of Two Collinear Harmonic oscillations: Linearity and Superposition Principle. (1) Oscillations having equal frequencies and (2) Oscillations having different frequencies (Beats).

Superposition of Two Perpendicular Harmonic Oscillations: Graphical and Analytical Methods. Lissajous Figures with equal and unequal frequency and their uses.

(12 Lectures)

UNIT - II

Waves Motion- General: Transverse waves on a string. Travelling and standing waves on a string. Normal Modes of a string. Group velocity, Phase velocity.

Sound: Simple harmonic motion - forced vibrations - Fourier's Theorem - Application to saw tooth wave and square wave - Intensity and loudness of sound - Decibels - Intensity levels - musical notes - musical scale.

(12 Lectures)

UNIT - III

Sound and Interference of light : Acoustics of buildings: Reverberation and time of reverberation - Sabine's formula - measurement of reverberation time - Acoustic aspects of halls and auditoria.

Interference: Interference: Division of amplitude and division of wavefront. Young's Double Slit experiment. Lloyd's Mirror and Fresnel's Biprism. Phase change on reflection: Stokes' treatment. Interference in Thin Films: parallel and wedge-shaped films.

(12 Lectures)

UNIT - IV

Types of Fringes and Michelson's Interferometer : Fringes of equal inclination (Haidinger Fringes); Newton's Rings: measurement of wavelength and refractive index.

Michelson's Interferometer: Idea of form of fringes (no theory needed), Determination of wavelength, Wavelength difference.

(12 Lectures)

UNIT - V

Diffraction and Polarization: Fraunhofer diffraction: Single slit; Double Slit. Multiple slits & Diffraction grating. Fresnel Diffraction: Half-period zones. Zone plate. Fresnel Diffraction pattern of a straight edge.

Polarization: Transverse nature of light waves. Plane polarized light - production and analysis. Circular and elliptical polarization.

(12 Lectures)

Outcome: Student understand the wave nature of light and law various parameter like wavelength etc measure from these principles.

(A CENTRAL UNIVERSITY)
DEPARTMENT OF PHYSICS

B.Sc. IV Semester : Session: 2019-2020
Core Course

		L	T	P	C
PHY CC 412	WAVES AND OPTICS LAB	0	0	2	2

Objective :

To provide the experimental evident of laws of wave optics.
How light has wave nature in confirmed through experiments.

1. To investigate the motion of coupled oscillators.
2. To determine the Frequency of an Electrically Maintained Tuning Fork by Melde's Experiment and to verify $\lambda^2 - T$ Law.
3. To study Lissajous Figures
4. Familiarization with Schuster's focusing; determination of angle of prism.
5. To determine the Refractive Index of the Material of a given Prism using Sodium Light.
6. To determine Dispersive Power of the Material of a given Prism using Mercury Light
7. To determine the value of Cauchy Constants of a material of a prism.
8. To determine the Resolving Power of a Prism.
9. To determine wavelength of sodium light using Fresnel Biprism.
10. To determine wavelength of sodium light using Newton's Rings.
11. To determine the wavelength of Laser light using Diffraction of Single Slit.
12. To determine wavelength of (1) Sodium & (2) spectrum of Mercury light using plane diffraction Grating
13. To determine the Resolving Power of a Plane Diffraction Grating.
14. To measure the intensity using photosensor and laser in diffraction patterns of single and double slits.

Outcome: Student train about spectrometer, uses of lasers also learn the alignment for experiments.

Essential Reading:

- A Text Book of Practical Physics, Indu Prakash and Ramakrishna, 11th Edition, 2011, Kitab Mahal, New Delhi.

Suggested Readings:

- Advanced Practical Physics for students, B.L. Flint & H.T. Worsnop, 1971, Asia Publishing House.
- Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers

PHY SE 411	BASIC INSTRUMENTATION SKILLS	L T P C			
		2	0	0	2

Theory: 30 Lectures

Credits: 02

Objective: This course is to get exposure with various aspects of instruments and their usage through hands-on mode. Experiments listed below are to be done in continuation of the topics.

UNIT - I

Basic of Measurement: Instruments accuracy, precision, sensitivity, resolution range etc. Errors in measurements and loading effects. **Multimeter:** Principles of measurement of dc voltage and dc current, ac voltage, ac current and resistance. Specifications of a multimeter and their significance.

UNIT - II

(6 Lectures)

Electronic Voltmeter: Advantage over conventional multimeter for voltage measurement with respect to input impedance and sensitivity. Principles of voltage, measurement (block diagram only). Specifications of an electronic Voltmeter/ Multimeter and their significance. **AC millivoltmeter:** Type of AC millivoltmeters: Amplifier- rectifier, and rectifier- amplifier. Block diagram ac millivoltmeter, specifications and their significance.

(6 Lectures)

UNIT - III

Cathode Ray Oscilloscope: Block diagram of basic CRO. Construction of CRT, Electron gun, electrostatic focusing and acceleration (Explanation only- no mathematical treatment), brief discussion on screen phosphor, visual persistence & chemical composition. Time base operation, synchronization. Front panel controls. Specifications of a CRO and their significance). Use of CRO for the measurement of voltage (dc and ac frequency, time period. Special features of dual trace, introduction to digital oscilloscope, probes. Digital storage Oscilloscope: Block diagram and principle of working.

(6 Lectures)

UNIT - IV

Signal Generators and Analysis Instruments: Block diagram, explanation and specifications of low frequency signal generators. Pulse generator, and function generator. Brief idea for testing, specifications. Distortion factor meter, wave analysis.

(5 Lectures)

UNIT - V

Digital Instruments: Principle and working of digital meters. Comparison of analog & digital instruments. Characteristics of a digital meter. Working principles of digital voltmeter.

Digital Multimeter: Block diagram and working of a digital multimeter. Working principle of time interval, frequency and period measurement using universal counter/ frequency counter, time- base stability, accuracy and resolution.

(7 Lectures)

The test of lab skills will be of the following test items:

1. Use of an oscilloscope.
2. CRO as a versatile measuring device.
3. Circuit tracing of Laboratory electronic equipment,
4. Use of Digital multimeter/VTVM for measuring voltages
5. Circuit tracing of Laboratory electronic equipment,

Approved
24/7/19

6. Winding a coil / transformer.
7. Study the layout of receiver circuit.
8. Trouble shooting a circuit
9. Balancing of bridges

Laboratory Exercises:

1. To observe the loading effect of a multimeter while measuring voltage across a low resistance and high resistance.
2. To observe the limitations of a multimeter for measuring high frequency voltage and currents.
3. To measure Q of a coil and its dependence on frequency, using a Q- meter.
4. Measurement of voltage, frequency, time period and phase angle using CRO.
5. Measurement of time period, frequency, average period using universal counter/frequency counter.
6. Measurement of rise, fall and delay times using a CRO.
7. Measurement of distortion of a RF signal generator using distortion factor meter.
8. Measurement of R, L and C using a LCR bridge/ universal bridge.

Open Ended Experiments:

1. Using a Dual Trace Oscilloscope
2. Converting the range of a given measuring instrument (voltmeter, ammeter)

Outcomes : Students can use the knowledge to handle the laser instruments in proper way and this will help them in higher studies as well as in practical application.

Essential Readings :

B.Sc. V Semester
Session: 2019-20
Skill Enhancement Course

		L	T	P	C
PHY SE 511	APPLIED OPTICS	2	0	0	2

THEORY: 30 Lectures

Objective : To have idea about the basic of laser and optical fiber and use the knowledge in spectroscopy and holography. Theory includes only qualitative explanation. Minimum five experiments should be performed covering minimum three sections.

UNIT – I

1. Sources and Detectors

Lasers, Spontaneous and stimulated emissions, Theory of laser action, Einstein's coefficients, Light amplification, Characterization of laser beam, He-Ne laser, Semiconductor lasers. (06 Lectures)

UNIT – II

(ii) Fourier Optics (6 Periods)

Concept of Spatial frequency filtering, Fourier transforming property of a thin lens.

(04 Lectures)

UNIT – III

b. Fourier Transform Spectroscopy

Fourier Transform Spectroscopy (FTS) is a powerful method for measuring emission and absorption spectra, with wide application in atmospheric remote sensing, NMR spectrometry and forensic science.

(07 Lectures)

UNIT – IV

(iii) Holography (6 Periods)

Basic principle and theory: coherence, resolution, Types of holograms, white light reflection hologram, application of holography in microscopy.

(06 Lectures)

UNIT – V

2. Photonics: Fibre Optics (9 Periods)

Optical fibres and their properties, Principal of light propagation through a fibre, The numerical aperture, Attenuation in optical fibre and attenuation limit, Single mode and multimode fibres.

(07 Lectures)

Experiments on Lasers:

- Determination of the grating radial spacing of the Compact Disc (CD) by reflection using He-Ne or solid state laser.
- To find the width of the wire or width of the slit using diffraction pattern obtained by a He-Ne or solid state laser.
- To find the polarization angle of laser light using polarizer and analyzer
- Thermal expansion of quartz using laser

Experiments on Semiconductor Sources and Detectors:

- V-I characteristics of LED
- Study the characteristics of solid state laser
- Study the characteristics of LDR
- Photovoltaic Cell
- Characteristics of IR sensor

D. Shukla

24/7/19

24.7.19

24.7.19

24/7/19

24/7/19

24/7/19

Experiments on Fourier Optics:

a. Fourier optic and image processing

1. Optical image addition/subtraction
2. Optical image differentiation
3. Fourier optical filtering
4. Construction of an optical 4f system

Experiment:

To study the interference pattern from a Michelson interferometer as a function of mirror separation in the interferometer. The resulting interferogram is the Fourier transform of the power spectrum of the source. Analysis of experimental interferograms allows one to determine the transmission characteristics of several interference filters. Computer simulation can also be done.

Experiments on Holography and interferometry:

1. Recording and reconstructing holograms
2. Constructing a Michelson interferometer or a Fabry Perot interferometer
3. Measuring the refractive index of air
4. Constructing a Sagnac interferometer
5. Constructing a Mach-Zehnder interferometer
6. White light Hologram

Experiments on Photonics: Fibre Optics

- a. To measure the numerical aperture of an optical fibre
- b. To study the variation of the bending loss in a multimode fibre
- c. To determine the mode field diameter (MFD) of fundamental mode in a single-mode fibre by measurements of its far field Gaussian pattern
- d. To measure the near field intensity profile of a fibre and study its refractive index profile
- e. To determine the power loss at a splice between two multimode fibre

Outcomes : Students can use the knowledge to handle the laser instruments in proper way and this will help them in higher studies as well as in practical application.

Essential Readings :

- Fundamental of optics, F. A. Jenkins & H. E. White, 1981, Tata McGraw hill.
- LASERS: Fundamentals & applications, K.Thyagrajan & A.K.Ghatak, 2010,Tata McGraw Hill
- Fibre optics through experiments,M.R.Shenoy, S.K.Khijwania, et.al. 2009, Viva Books
- Nonlinear Optics, Robert W. Boyd, (Chapter-I), 2008, Elsevier.

Suggested Readings :

- Optics, Karl Dieter Moller, Learning by computing with model examples, 2007, Springer.
- Optical Systems and Processes, Joseph Shamir, 2009, PHI Learning Pvt. Ltd.
- Optoelectronic Devices and Systems, S.C. Gupta, 2005, PHI Learning Pvt. Ltd.
- Optical Physics, A.Lipson, S.G.Lipson, H.Lipson, 4th Edn., 1996, Cambridge Univ. Press

Elective Course

PHY EC 511	DIGITAL AND ANALOG CIRCUITS AND INSTRUMENTATION	L	T	P	C
		4	0	0	4

Theory: 60 Lectures

Credits: 04

Objective : To have idea about the basics of electronics so that students can use the knowledge in electronics and electrical circuits.

UNIT-I

Digital Circuits : Difference between Analog and Digital Circuits. Binary Numbers. Decimal to Binary and Binary to Decimal Conversion, AND, OR and NOT Gates (Realization using Diodes and Transistor). NAND and NOR Gates as Universal Gates. XOR and XNOR Gates.

De Morgan's Theorems. Boolean Laws. Simplification of Logic Circuit using Boolean Algebra. Fundamental Products. Minterms and Maxterms. Conversion of a Truth Table into an Equivalent Logic Circuit by (1) Sum of Products Method and (2) Karnaugh Map.

Binary Addition. Binary Subtraction using 2's Complement Method). Half Adders and Full Adders and Subtractors, 4-bit binary Adder-Subtractor.

(14 Lectures)

UNIT-II

Semiconductor Devices and Amplifiers: Semiconductor Diodes: p and n type semiconductors. Barrier Formation in PN Junction Diode. Qualitative Idea of Current Flow Mechanism in Forward and Reverse Biased Diode. PN junction and its characteristics. Static and Dynamic Resistance. Principle and structure of (1) LEDs (2) Photodiode (3) Solar Cell.

(12 Lectures)

UNIT-III

Bipolar Junction transistors: n-p-n and p-n-p Transistors. Characteristics of CB, CE and CC Configurations. Active, Cutoff, and Saturation Regions. Current gains α and β . Relations between α and β . Load Line analysis of Transistors. DC Load line and Qpoint. Voltage Divider Bias Circuit for CE Amplifier. h-parameter Equivalent Circuit. Analysis of a single-stage CE amplifier using Hybrid Model. Input and Output Impedance. Current, Voltage and Power Gains. Class A, B, and C Amplifiers.

(14 Lectures)

UNIT-IV

Instrumentations : Introduction to CRO: Block Diagram of CRO. Applications of CRO: (1) Study of Waveform, (2) Measurement of Voltage, Current, Frequency, and Phase Difference.

(08 Lectures)

UNIT - V

Power Supply: Half-wave Rectifiers. Centre-tapped and Bridge Full-wave Rectifiers Calculation of Ripple Factor and Rectification Efficiency, Basic idea about capacitor filter, Zener Diode and Voltage Regulation

(12 Lectures)

Outcomes: Students can use the knowledge to handle the instruments in proper way and this will help them in higher studies as well as in practical applications.

Elective Course

		L	T	P	C
PHY EC 512	DIGITAL AND ANALOG CIRCUITS AND INSTRUMENTS LAB	0	0	2	2

Credit : 02

Objective: To illustrate the students different analog and digital circuits and their application in practice. To impart knowledge on assessing performance of electronic circuit through monitoring of sensitive parameters.

1. To measure (a) Voltage, and (b) Frequency of a periodic waveform using a CRO
2. To verify and design AND, OR, NOT and XOR gates using NAND gates.
3. To minimize a given logic circuit.
4. Half adder, Full adder and 4-bit Binary Adder.
5. Adder-Subtractor using Full Adder I.C.
6. To design an astable multivibrator of given specifications using 555 Timer.
7. To design a monostable multivibrator of given specifications using 555 Timer.
8. To study IV characteristics of PN diode, Zener and Light emitting diode
9. To study the characteristics of a Transistor in CE configuration.
10. To design a CE amplifier of a given gain (mid-gain) using voltage divider bias.
11. To design an inverting amplifier of given gain using Op-amp 741 and study its frequency response.
12. To design a non-inverting amplifier of given gain using Op-amp 741 and study its Frequency Response.
13. To study a precision Differential Amplifier of given I/O specification using Opamp.
14. To investigate the use of an op-amp as a Differentiator
15. To design a Wien Bridge Oscillator using an op-amp.

Outcomes : Identify the relevant information to the analog electronic circuit. Set up testing strategies and select proper instruments to evaluate performance characteristics of electronic circuits. Practice different type of digital and analog circuits.

Essential Readings:

- OP-Amps and Linear Integrated Circuit, R. A. Gayakwad, 4th edition, 2000, Prentice Hall.
- Electronic Principle, Albert Malvino, 2008, Tata Mc-Graw Hill.

Elective Course

		L	T	P	C
PHY EC 513	SOLID STATE PHYSICS	4	0	0	4

Theory: 60 Lectures

Credits: 04

Course Objectives :

1. The course aims to give a flavor of basic concepts of solid state materials physics, mostly crystalline materials. The different types of structures and their various physical properties, such as, thermal, formation of bands, Dielectric, Ferroelectric, magnetic, semiconducting and superconducting properties will be discussed.
2. Title and course code Solid State Physics.

UNIT - I

Crystal Structure: Solids: Amorphous and Crystalline Materials. Lattice Translation Vectors. Lattice with a Basis. Unit Cell. Miller Indices. Reciprocal Lattice. Types of Lattices. Brillouin Zones. Diffraction of X-rays by Crystals. Bragg's Law. (12 Lectures)

UNIT - II

Elementary Lattice Dynamics: Lattice Vibrations and Phonons: Linear Monoatomic and Diatomic Chains. Qualitative Description of the Phonon Spectrum in Solids. Dulong and Petit's Law, Einstein and Debye theories of specific heat of solids. T₃ law (12 Lectures)

UNIT - III

Magnetic Properties of Matter: Dia-, Para-, Ferri- and Ferromagnetic Materials. Classical Langevin Theory of dia- and Paramagnetic Domains. Quantum Mechanical Treatment of Paramagnetism. Curie's law, Weiss's Theory of Ferromagnetism and Ferromagnetic Domains. Discussion of B-H Curve. Hysteresis and Energy Loss. (12 Lectures)

UNIT - IV

Dielectric Properties of Materials: Polarization. Local Electric Field at an Atom. Depolarization Field. Electric Susceptibility. Polarizability. Clausius Mosotti Equation. Classical Theory of Electric Polarizability. Normal and Anomalous Dispersion. (12 Lectures)

UNIT - V

Elementary band theory and Superconductivity: Kronig Penny model. Band Gaps. Conductors, Semiconductors and insulators. P and N type Semiconductors. Conductivity of Semiconductors, mobility, Hall Effect, Hall coefficient.

Superconductivity: Experimental Results. Critical Temperature. Critical magnetic field. Meissner effect. Type I and type II Superconductors, London's Equation and Penetration Depth. Isotope effect. (12 Lectures)

Outcome:

Upon successful completion, students will have the knowledge and skills to understand

- (a) The different possible structures of crystalline solid materials.
- (b) The origin of the various physical properties of these solid materials.
- (c) The signification and value of solid state physics in our daily life.

PHY EC 513	SOLID STATE PHYSICS	L	T	P	C
		4	0	0	4

Theory: 60 Lectures

Credits: 04

Objective :

1. To describe the crystalline structures and diffraction techniques for crystal structure identification.
2. To describe the dynamics and different theoretical concepts related to specific heat.
3. To describe different properties like magnetic dielectric and superconducting of solids.

UNIT - I

Crystal Structure: Solids: Amorphous and Crystalline Materials. Lattice Translation Vectors. Lattice with a Basis. Unit Cell. Miller Indices. Reciprocal Lattice. Types of Lattices. Brillouin Zones. Diffraction of X-rays by Crystals. Bragg's Law.
(12 Lectures)

UNIT - II

Elementary Lattice Dynamics: Lattice Vibrations and Phonons: Linear Monoatomic and Diatomic Chains. Qualitative Description of the Phonon Spectrum in Solids. Dulong and Petit's Law, Einstein and Debye theories of specific heat of solids. T^3 law
(12 Lectures)

UNIT - III

Magnetic Properties of Matter: Dia-, Para-, Ferri- and Ferromagnetic Materials. Classical Langevin Theory of dia- and Paramagnetic Domains. Quantum Mechanical Treatment of Paramagnetism. Curie's law, Weiss's Theory of Ferromagnetism and Ferromagnetic Domains. Discussion of B-H Curve. Hysteresis and Energy Loss.
(12 Lectures)

UNIT - IV

Dielectric Properties of Materials: Polarization. Local Electric Field at an Atom. Depolarization Field. Electric Susceptibility. Polarizability. Clausius Mosotti Equation. Classical Theory of Electric Polarizability. Normal and Anomalous Dispersion.
(12 Lectures)

UNIT - V

Elementary band theory and Superconductivity: Kronig Penny model. Band Gaps. Conductors, Semiconductors and insulators. P and N type Semiconductors. Conductivity of Semiconductors, mobility, Hall Effect, Hall coefficient.

Superconductivity: Experimental Results. Critical Temperature. Critical magnetic field. Meissner effect. Type I and type II Superconductors, London's Equation and Penetration Depth. Isotope effect.
(12 Lectures)

Outcomes:

1. The students will be able to learn crystal structures and identification process of crystal structures.
2. The students will be able to know the idea of different types of solids and their applications in various fields on the basis of properties.

B.Sc. V Semester : Session: 2019-2020
Elective Course

		L	T	P	C
PHY EC 514	SOLID STATE PHYSICS LAB	0	0	2	2

Credit : 02

Objectives : This course will concentrate on the experimental determination of various common physical properties of the solid state materials, such as dielectric constant magnetic susceptibility, Piezoelectric coefficient, P - E and M - H hysteresis, resistivity, Hall coefficient, etc.

1. Measurement of susceptibility of paramagnetic solution (Quinck's Tube Method)
2. To measure the Magnetic susceptibility of Solids.
3. To determine the Coupling Coefficient of a Piezoelectric crystal.
4. To measure the Dielectric Constant of a dielectric Materials with frequency
5. To determine the complex dielectric constant and plasma frequency of metal using Surface Plasmon resonance (SPR)
6. To determine the refractive index of a dielectric layer using SPR
7. To study the PE Hysteresis loop of a Ferroelectric Crystal.
8. To draw the BH curve of iron using a Solenoid and determine the energy loss from Hysteresis.
9. To measure the resistivity of a semiconductor (Ge) crystal with temperature by fourprobe method (from room temperature to 150 °C) and to determine its band gap.
10. To determine the Hall coefficient of a semiconductor sample.

Outcomes : After undergoing through this course, students will be able to have a sense of various physical properties and their order of magnitude of various types of solid state materials.

Essential Suggested :

- A Text Book of Practical Physics, Indu Prakash and Ramakrishna, 11th Ed., 2011, Kitab Mahal, New Delhi
- Elements of Solid State Physics, J.P. Srivastava, 2nd Ed., 2006, Prentice-Hall of India

Suggested Readings :

- Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House.
- Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers

Link for e-Books for Physics :

PHY SE 611	RENEWABLE ENERGY AND ENERGY HARVESTING	2	0	0	2
------------	--	---	---	---	---

Theory: 30 Lectures

Credits: 02

Objective :

1. To create awareness among students about environmental pollutions and use of renewable energy sources.
2. Describe the limitations of conventional energy sources and technological developments in the field of green energy.
3. To aware students about the future energy crises and motivate them to search their alternatives and modify existing technology for green energy.
4. The aim of this course is not just to impart theoretical knowledge to the students but to provide them with exposure and hands-on learning wherever possible

UNIT - I

Fossil fuels and Alternate Sources of energy: Fossil fuels and their limitation, Nuclear Energy and its limitations Conventional and non-conventional energy sources, need of renewable energy,, Introduction of various renewable energy sources ; Solar energy, Ocean thermal energy, Wind Energy, Tidal Energy, Wave energy systems.
(6 Lectures)

UNIT - II

Biomass, biochemical conversion, biogas generation, geothermal energy tidal energy,
Wind Energy harvesting: Fundamentals of Wind energy, Wind Turbines and different electrical machines in wind turbines,
(6 Lectures)

UNIT - III

Solar energy: Solar energy, its importance, storage of solar energy, solar pond, non convective solar pond, applications of solar pond and solar energy, solar water heater, flat plate collector, solar distillation, solar cooker, solar green houses, solar cell, absorption air conditioning. Need and characteristics of photovoltaic (PV) systems, PV models and equivalent circuits, and sun tracking systems.
(6 Lectures)

UNIT - IV

Ocean Energy: Ocean Thermal Energy, Ocean Thermal Energy Conversion, Ocean Energy Potential against Wind and Solar, Wave Characteristics and Statistics, Wave Energy Devices. (3 Lectures)
Tide characteristics and Statistics, Tide Energy Technologies,
Geothermal Energy: Geothermal Resources, Geothermal Technologies.
(6 Lectures)

UNIT - V

Hydro Energy: Hydropower resources, hydropower technologies, environmental impact of hydro power sources, Hydroelectricity.
Carbon captured technologies, cell, batteries, power consumption
Environmental issues and Renewable sources of energy, sustainability.
(6 Lecture)

Demonstrations and Experiments

1. Demonstration of Training modules on Solar energy, wind energy, etc.
2. Conversion of vibration to voltage using piezoelectric materials
3. Conversion of thermal energy into voltage using thermoelectric modules.

Outcomes –

1. Students will be aware about used energy sources their limitations.
2. Students will be aware the renewable energy sources and technological developments in the field.
3. Students will be motivated for the use of safe and environment friendly energy sources.

		L	T	P	C
PHY EC 611	ELEMENTS OF MODERN PHYSICS	4	0	0	4

Theory: 60 Lectures,

Objectives : Aim of the course is to get aware of basic principles of modern physics, wave nature and radioactivity etc.

UNIT - I

Planck's quantum, Planck's constant and light as a collection of photon;s Photo-electric effect and Compton scattering. De Broglie wavelength and matter waves' Davisson-Germer experiment.

(8 Lectures)

Problems with Rutherford model-instability of atoms and observation of discrete atomic spectra' Bohr's quantization rule and atomic stability; calculation of energy levels for hydrogen like atoms and their spectra.

(4 Lectures)

UNIT - II

Position measurement gamma ray.; microscope thought experiment; Wave-particle duality, Heisenberg uncertainty principle- impossibility of a particle following a trajectory; Estimating minimum energy of a confined particle using uncertainty principle; Energy-time uncertainty principle.

Two slit interference experiment with photons, atoms and particles; liner superposition principle as a consequence; Matter waves and wave amplitude; Schrodinger equation for non-relativistic particles; Momentum and Energy operators; stationary states; physical interpretation of wave function, probabilities and normalization; Probability and probability current densities in one dimension.

(12 Lectures)

UNIT - III

One dimensional infinitely rigid box- energy eignevalues and eigenfunctions, normalization; Quantum dot as an example, Quantum mechanic scattering and tunneling in one dimension- across a step potential barrier.

(12 Lectures)

UNIT - IV

Size and structure of atomic nucleus and its relation with atomic weight; Impossibility of an electron being in the nucleus as a consequence of the uncertainty principle. Nature of nuclear force, NZ graph, semi-empirical mass formula and binding energy.

(12 Lectures)

UNIT - V

Radioactivity: stability of nucleus; Law of radioactive decay; Mena life & half-life; α decay; β decay- energy released, spectrum and Pauli's prediction of neutron; γ -ray emission.

Fission and fusion- mass deficit, relativity and generation of energy; Fission- nature of fragments and emission of neutrons. Nuclear reactor; slow neutrons interacting with Uranium 235; Fusion and thermonuclear reactions.

(12 Lectures)

Outcomes : Student will learn about modern physics related to nuclear and its radiation process and haza....

Elective Course

		L	T	P	C
PHY EC 612	ELEMENTS OF MODERN PHYSICS LAB.	2	0	0	2

Objectives : Aim of the course is to get aware of basic principles of modern physics, wave nature and radioactivity etc.

LIST OF EXPERIMENTS ;

1. To determine value of Boltzmann constant using V-I characteristic of PN diode.
2. To determine work function of material of filament of directly heated vacuum diode.
3. To determine value of Planck's constant using LEDs of at least 4 different colours.
4. To determine the ionization potential of mercury.
5. To determine the wavelength of H-alpha emission line of Hydrogen atom.
6. To determine the absorption lines in the rotational spectrum of Iodine vapour.
7. To study the diffraction patterns of single and double slits using laser source and measure its intensity variation using Photosensor and compare with incoherent source- Na light.
8. Photo-electric effect; photo current versus intensity and wavelength of light; maximum energy of photo-electrons versus frequency of light.
9. To determine the value of e/m by magnetic focusing.
10. To setup the Millikan oil drop apparatus and determine the charge of an electron.

Elective Course

PHY EC 613	NUCLEAR AND PARTICLE PHYSICS	L T P C			
		6	0	0	6

Theory: 75 Lectures, 15 Tutorials

Credits: 06

Objective.

1. This is a basic course in physics which deals with the phenomena taking place in the nuclear domain. Student will be given an insight into the dimension of a nuclear.
2. The aim is to tell them about the stability of nucleus and various other properties.
3. The students will learn about various type of radiation and their interaction with matter.
4. The course is such designed to teach students about various types of nuclear reactions and their energies.
5. Students will learn the methods to find the mass and charge of any nucleus by using some instruments.

UNIT - I

General Properties of Nuclei: Constituents of nucleus and their Intrinsic properties, quantitative facts about size, mass, charge density (matter energy), binding energy, average binding energy and its variation with mass number, main features of binding energy versus mass number curve, N/A plot, angular momentum, parity, magnetic moment, electric moments, nuclear excited states. **(15 Lectures)**

UNIT - II

Nuclear Models: Liquid drop model approach, semi empirical mass formula and significance of various terms, condition of nuclear stability. Fermi gas model, evidence for nuclear shell structure, nuclear magic numbers, basic assumption of shell model, concept of nuclear force. **(15 Lectures)**

UNIT - III

Radioactivity decay: (a) Alpha decay: basics of α -decay processes, theory of α - emission, Gamow factor, Geiger Nuttall law, (b) β -decay: positron emission, electron capture, neutrino hypothesis. (c) Gamma decay: Gamma rays emission. **(15 Lectures)**

UNIT - IV

Nuclear Reactions: Types of Reactions, Conservation Laws, kinematics of reactions, Q-value, reaction rate, reaction cross section, Concept of compound and direct reaction, resonance reaction, Coulomb scattering (Rutherford scattering).

Detector for Nuclear Radiations: GM Counter. Basic principle of Scintillation Detectors and construction of photo-multiplier tube (PMT). Semiconductor Detectors for charge particle and photon detection (concept of charge carrier and mobility). **(15 Lectures)**

UNIT - V

Particle Accelerators: Accelerator facility available in India: Van-de Graaff generator (Tandem accelerator), Linear accelerator, Cyclotron, Synchrotrons.

Particle physics: Particle interactions; basic features, types of particles and its families. Symmetries and Conservation Laws: energy and momentum, angular momentum, parity, baryon number, Lepton number, Isospin, Strangeness and charm, concept of quark model, color quantum number and gluons. **(15 Lectures)**

Outcome :

1. After taking this course, students are able to determine the charge, mass of any nuclear by using various spectrograph.
2. They are able to understand the size of nucleus and all its properties.
3. This course has led the students to understand interaction of various types of radiation with matter which they observe in their daily life. Its easy of them now to relate the theory to practical.
